Individual Report

For this project I was assigned to provide the assets towards the final result. I mainly used unity to find assets that were free and easy to access and downloaded them onto a group unity account that everyone had access to so people can choose which ones they'd want to go with as I had provided multiple options for the background setting and music.

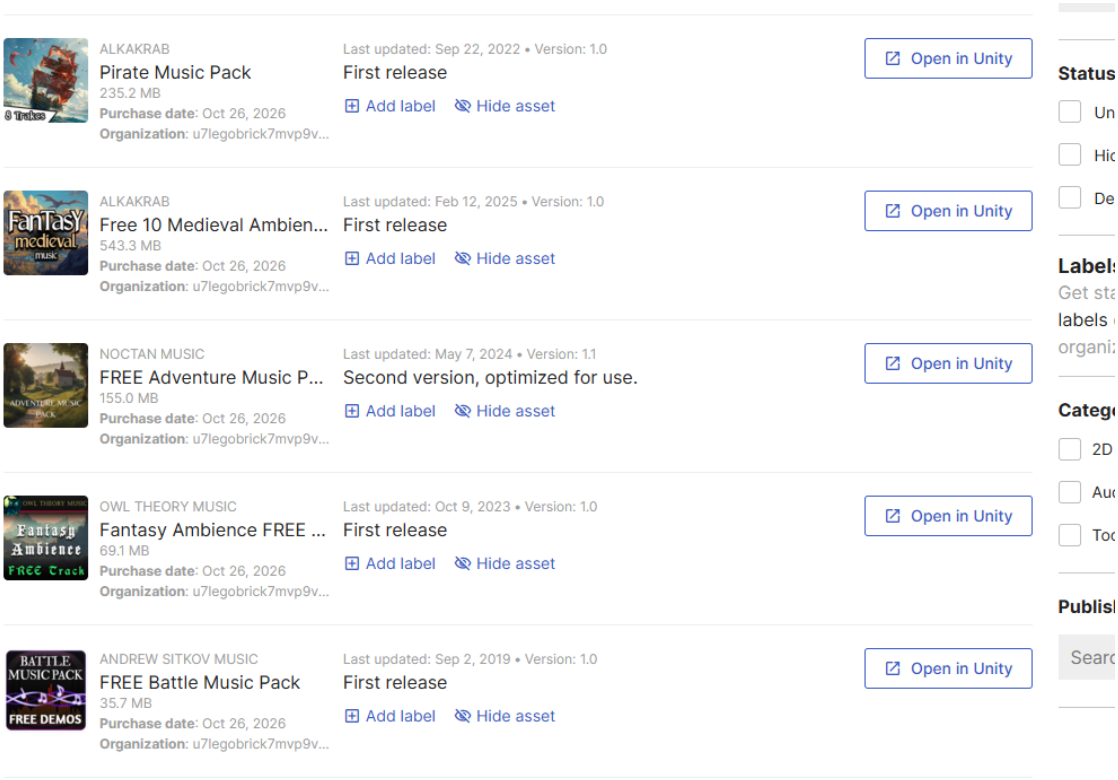

Background ideas:

For the background we wanted to go with a space theme so it could be similar to the original inspiration of our project, The ship from the movie Treasure Planet which appears in space. The idea was to have several planets afloat and moving as animations within the project as shown in the final video.

Music

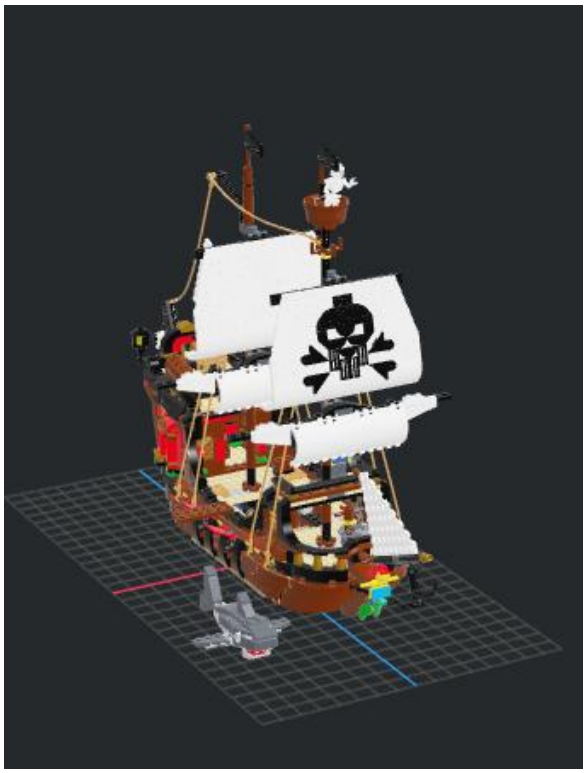

I haven't personally watched the movie myself but I have researched the basic concepts of the film and searched up the original photos of the ship to get a slight idea. The movie was a fantasy genre, so I mainly looked for sci-fi like music that could go well as the background, and then further searched for pirate like music to fit the pirate themes, like the ship.

The ship

I used the software, mecca bricks to search for ship models. I used mecca bricks because it was easier to find premade models for us to use instead of making it from scratch with the very limited time we had, meaning the others could spend more of their time adjusting the designs and creating the animations instead.

We wanted a ship with 2 floors, so I looked specifically for a ship with 2 floors, I looked at the different models on mecca bricks and decided which ship looked best and most like the ship originally in the film.

Lego Figure

I created the lego figure in mecca bricks, as shown in the project model. The lego figure I had created is a pirate which is shown at the end of the ship. The animation for this figure is them jumping up and down with their sword in their hand.

As you can see in the screenshots above, the Pirate starts by standing on the ground then starts his jump, where they raise up their body, arms, sword and legs, then finally reach the height of the jump with arms fully raised to then fall back down.
